OUR EXPERTISE

Web & Mobile Applications. DESI has extensive experience and highly skilled technology experts that allow us to recommend innovative solutions to your application needs; from small workgroup environments to the entire enterprise. We have proven expertise and experience in implementing solutions using modern **Web and Mobile** development technology platforms as well as managing those efforts with **Agile** methodologies, a **DevSecOps** culture, and **Continuous Integration/Continuous Delivery/Deployment** (**CI/CD**) practices that ensure we deliver results fast, reliable, and of value.

Cloud & Emerging Technologies. Legacy applications are falling further and further behind the latest technologies of today. The need to move from expensive on-premise hosting solutions that lack scalability has become a necessity in today's environment. Cloud based solutions solve these issues and afford our technologist the ability to deliver high end solutions quicker. We are experts in: **App modernization** architected for today's cloud environments; **CI/CD** to improve quality and increase deployment speed; **Infrastructure as Code** (IaC), using tools like Ansible and CloudFormation, to minimize risks, ensure configuration consistency, and promote speed and simplicity of the infrastructure; **DevSecOps** bringing security into the forefront and integrating development and operations.

Collaboration Technologies. DESI has a wealth of knowledge and experience in designing and implementing collaboration solutions to meet your organization's communication challenges. Whether it's small project team collaboration workspaces or large enterprise portal solutions, we have the skills and experience to help you. DESI is a Silver Collaboration and Content competency partner in the Microsoft Partner Network and can help you implement and achieve results with **SharePoint**; whether out-of-the-box or advanced custom solutions. Experts in solutions using the MS Power Platform.

Content & Document Management. DESI has experience in several tools and technologies that can help you manage your enterprise content and ensure that content is being surfaced and accessed appropriately. Whether it is dealing with existing paper or new digital content, we implement the best methods to store your content that will meet your business requirements. From metadata to taxonomies, we leverage our expertise to store, identify, and manage your content so that it provides value to you. But this digital content contains critical business information that may be sensitive, proprietary, or even classified. We ensure the proper architecture and controls are implemented to secure these digital assets. Making sure only the right information is in the right hands at the right time. We implement solutions and applications that allow users to effortlessly search and access your corporate content ensuring that authorized people have the data they need to perform their job and make the right decisions quickly.

Business Process Management. DESI will analyze your processes looking for opportunities to reduce cycle time, increase throughput, eliminate bottlenecks, and remove steps that are not providing value. We have experience in several BPM and workflow technologies to automate these processes ensuring visibility into a consistent repeatable process that integrates your people, processes, and technology. But it cannot stop there. Your environment, challenges, and opportunities are constantly changing. We ensure your automated business processes can easily adapt to these changes and leverage metrics to provide a fact-based method for decision making. It's all about getting the right work, to the right people, at the right time.

Data Visualization. We can help you turn your data into valuable information – knowledge - to make quick and informed decisions resulting in improved performance and operating results. We have expertise in: **Qlik**; **Tableau**; **Power BI**; and more.
